NEWS FOR THE CANADIAN ProVM MARKET

THE IMPORTANCE OF FORECASTING

Forecasting is a key element in conducting any business. The realism that good forecasting provides can help you develop and improve your strategic plans by increasing your knowledge of the marketplace in which you operate. The forecast that you or your sales force generates is the source of information that allows you to manage virtually all aspects of your business.

Here are 5 ways in which forecasting can improve your business:

- 1) Planning** - When you make a forecast, you are also planning future activities, providing a business plan for the upcoming year or season. Assuming that you have a quota to fill, forecasting is the tool that identifies significant gaps or overages. By forecasting earlier, you afford yourself more time to create action plans aimed at overcoming any predicted challenges.
- 2) Demand** - A forecast is your best tool to get a good estimate of the demand for the products or services you sell. This will allow you to more accurately resource your business to meet those demands, making the best decisions about hiring (permanent or temporary), marketing and expansion.

- 3) Supply Chain Management** - The more accurate the forecast, the better prepared your company will be to manage inventory, avoiding both overstocked and stock-out situations. Stable inventory also means better management of the services you provide, and offers opportunity to take advantage of just-in-time ordering.
- 4) Financial planning** - Anticipating sales gives you the information you need to predict revenue and profit. Having a solid forecast at your disposal also gives you the ability to explore possibilities to increase both revenue and net income.
- 5) Marketing** - An advanced look at future business offers the opportunity to schedule promotions if it appears sales will be weak. In extreme cases, forecasts may lead to discontinuing certain products or services.

At Univar, we embrace the challenge of forecasting as a means to make a positive impact on both our suppliers and customers. This month, we will ask for the help of customers to devise our own forecasts and give us feedback on our areas for improvement, with an ultimate goal to enhance our service and help the industry thrive.

Submit your Forecast

Submit your ProVM product forecast to Univar this February for a chance to win **225,000 Rewards points**, a \$1000 value. [Click here](#) to start.

How are we doing?

Complete our 7 minute survey and you can earn a chance to win our **225,000 Rewards points** giveaway. [Click here](#) to start.

2017 Rewards Program

IVM EXPERTS

BRINGING INNOVATION TO VEGETATION MANAGERS. IT'S WHAT WE DO.

Weed pressures are always expanding. So is our commitment to developing solutions for your integrated vegetation management.

With more than 50 years as leaders in vegetation management, the IVM Experts at Dow AgroSciences continue to bring innovation to the Canadian market through their unique combination of local expertise and a global research and development pipeline.

“By working closely with the Canadian vegetation management industry, we continue to find new ways to support our customers and provide effective solutions based on their needs,” says Carmen Holding, Specialties Product Manager with Dow AgroSciences.

Answering a need for more problem broadleaf weed control options, Dow AgroSciences is pleased to bring OcTTain™ XL to the Canadian vegetation management market for 2017.

As one of Western Canada's most trusted and widely used broadleaf herbicides in crop production, OcTTain XL is a proven performer. This Group 4 herbicide provides effective, economical control of a broad spectrum of annual broadleaf weeds, including resistant kochia.

“Dow AgroSciences provides vegetation managers from coast to coast with a portfolio of product options, resources and stewardship training to support their work,” says Holding. “We are pleased to add OcTTain XL as a valued solution to the range of products we currently offer.”

OcTTain XL will provide an effective, economical herbicide solution on rights of way and roadsides, where grass health is critical to the success of vegetation management programs.

With this announcement, Dow AgroSciences is expanding on a broad portfolio of strong performers available to vegetation managers, including ClearView™, Milestone™ and Sightline™ herbicides.

OcTTain™ XL is approved for use on industrial sites, railways, roadsides, rights of way and rangeland by the Pest Management Regulatory Agency.

Dow AgroSciences IVM products provide long-term control for cost-effective vegetation management. To learn more, talk to a Dow AgroSciences IVM Expert or visit ivmexperts.ca.
