

Extend your residual fly control with this powerful one-two punch combination

Annihilator PolyZone®

- Contains deltamethrin, a third generation pyrethroid (Group 3) insecticide
- Easy to use liquid formulation with **proprietary PolyZone technology for extended residual control**
- Registered for use on exterior and interior surfaces of livestock structures

QuickBayt® Granular Fly Bait

- Contains imidacloprid (group 4) insecticide in a granular bait
- Contains a mixture of powerful fly attractants
- Works quickly and lasts longer than other baits
- Controls flies resistant to pyrethroids or organophosphates
- Can be applied as a scatter bait (see label for details) or in a tamper proof bait station

Begin fly management programs early

- Locate where flies are breeding. Implement proper manure management and reduce fly resources including food and water. Where possible, implement exclusion methods such as caulking or sealing up openings to reduce fly entry.
- Follow all product label directions
- Treat fly resting areas with Annihilator PolyZone such as walls, ceilings, window screens, posts, and entry points
- Apply QuickBayt Fly Bait in tamper resistant bait stations or as a scatter bait (see label for details) close to where flies congregate
