

# INDICATOR™ BASAL OIL BLUE

## Basal Oil Dye

### An Oil Soluble Blue Colourant for Basal, Cut Stump and Dormant Stem Applications

NET CONTENTS: 1 L

**ACTIVE INGREDIENTS:** Dye, and proprietary ingredient mixture.....100%

#### GENERAL INFORMATION

BASAL OIL BLUE is an easy-to-use, oil soluble, liquid colourant for use with Basal, Cut Stump and Dormant Stem Applications. It works with oil soluble herbicides to mark areas that have been treated. The mark is long lasting, allowing the applicator to eliminate costly double applications and skips and to monitor treated areas for later season inspections. BASAL OIL BLUE is formulated to be used with hydrocarbon mixtures like penetrant oils, diesel fuel, kerosene and other petroleum distillates.

BASAL OIL BLUE application rates can be adjusted to the applicator's preference depending on the duration of the mark desired, the bark' initial colour and texture.

#### CAUTION: KEEP OUT OF REACH OF CHILDREN

Avoid contact with skin, eyes and clothing. Do not take internally.

#### PRECAUTIONARY STATEMENT

Do not contaminate water sources by runoff from cleaning of equipment, disposal of equipment wash-waters, or spray waste. Wear eye protection and rubber gloves when handling or using BASAL OIL BLUE.

#### STORAGE AND DISPOSAL

Store in original container only. Keep container tightly closed. Store above 0 °C to prevent freezing. Do not contaminate food or feed by leak, spill or disposal of product. Do not store with oxidizing agents or ammonium nitrate. Triple rinse and offer for recycling or disposal in accordance with local, provincial and federal regulations.

#### APPLICATION RATES

Shake well before using. For low volume applications and backpacks apply 10 – 75 mL/4 Litres of spray mixture. For high volume applications use 0.65 Litre - 1.25 Litre of BASAL OIL BLUE per 400 L of spray mixture. Add BASAL OIL BLUE to the spray tank following the pre-mixing of the herbicides. The rate can be adjusted up or down. Higher rates will increase the darkness of the spray pattern.

Colouration may vary with bark colour and texture as well as the duration of the colour desired.

For optimal rates of BASAL OIL BLUE, test with the spray solution and adjust as needed. Find a rate that is functional and economical. Use only with oil based mixtures. BASAL OIL BLUE can be used with any type of sprayer including backpack, wand, or any other type of sprayer. Add to the spray solution after herbicides are pre-mixed. NOTE: Do not add oil soluble colorants to non-oil based herbicides or spray solutions that are less than 60% oil based.

#### FIRST AID

**Inhalation:** Move victim to fresh air. Give artificial respiration ONLY if breathing has stopped. Give cardiopulmonary resuscitation (CPR) if there is no breathing AND no pulse. Obtain medical advice **IMMEDIATELY**.

**Skin contact:** Flush skin with running water for a minimum of 20 minutes. Start flushing while removing contaminated clothing. If irritation persists, repeat flushing. Obtain medical attention **IMMEDIATELY**.

**Eye contact:** Immediately flush eyes with running water for a minimum of 20 minutes. Hold eyelids open during flushing. If irritation persists, repeat flushing. Obtain medical attention **IMMEDIATELY**.

**Ingestion:** Do not induce vomiting. Do not give any liquid to the victim. If spontaneous vomiting occurs, have victim lean forward with head down to avoid breathing in of vomitus. Obtain medical attention **IMMEDIATELY**.
